

Highly robust and powerful AC and EC

# INDUSTRIAL AIR CURTAINS

WINDBOX BB, L and XL air curtains create a high pressure effective air barrier for doors up to 8 meters high, reducing energy losses. Ready for horizontal, vertical or recessed installation.

Airtècnics industrial air curtains range for large doors such as entrances to warehouses, hangars, factories, industrial buildings, logistic centres or loading bays.

## Benefits for freezers

TRIOJET air curtain system is specially designed for freezers with large temperature differences. Ice, snow and fog are reduced, decreasing the risk of accidents while increasing energy savings and correct preservation of frozen products.

## Double air jet for longer distances

MAXWELL high performance air curtains for vertical or horizontal installations in large industrial doors. With their double air jet with coanda effect can achieve longer distances more efficiently. Easy dockable modules to reach large dimensions.

## IP55 protection for cold chambers

KOOL air curtains ensure a low turbulence and high velocity air jet, thus efficiently separating spaces with high temperature differences. With IP55 protection specially designed for applications with extrem cold, humidity and corrosion environments.
